

BLUE LAGOS

From Riverine Communities
to Better Decisions

134 communities | 502,002 people represented

COMMUNITY • EVIDENCE • ACTION

Blue Lagos Sustainability Initiative

SEPTEMBER 2026

Blue Lagos listens, understands and acts.

We work with Lagos' riverine communities to turn local evidence into practical action.

01

LISTEN

Engage directly with communities and local leadership.

02

UNDERSTAND

Collect and map community-level evidence.

03

ACT

Connect needs to interventions and partnerships.

Our focus is the riverine and coastal communities where access, health, infrastructure, livelihoods and environmental pressure differ from inland Lagos.

From community relationships to practical response.

Our role is to stay close enough to communities to understand the need, organize the evidence and help bring the right response together.

01

COMMUNITY PRESENCE

Reach communities directly, including places where the journey depends on water.

02

STRUCTURED EVIDENCE

Turn local knowledge into a register that can be compared community by community.

03

PRACTICAL RESPONSE

Work with communities and partners on health, water, civic inclusion and planning.

Blue Lagos is the bridge from what communities say to what partners and government can act on.

We started by going community by community.

Actual community-level evidence now supports a clearer view of riverine Lagos.

93 geolocated communities

within the 134-community field register

Community priorities

The communities are different, but the same problems keep appearing.

Different communities carry different combinations, but health, access, environment, infrastructure and livelihoods repeatedly overlap.

Healthcare is not only about having a facility nearby.

For many communities, the health journey begins at the landing point.

Planning implication Health outreach, safe water and emergency movement need to be planned together.

Straight-line screening distance to mapped health facilities

teal <5 km sand 5-10 km coral >10 km

Water is part of the transport network.

Communities, waterways and landing points have to be understood together.

Communities within Lagos's water-shaped access network

communities • mapped waterways • mapped marine-access points

WATER-RELIANT ACCESS AFFECTS

- Emergency evacuation
- Healthcare
- Education
- Markets and jobs
- Government services

Road planning alone cannot explain practical reach.

Environmental pressure is already part of daily life.

Field experience and historical spatial evidence point to pressure on settlement, housing and livelihoods.

22.4%

of surveyed communities reported losing living space or houses to erosion or water encroachment in the previous five years.

Read the two evidence types separately

Community impacts are field-reported. The maps reproduce historical analysis from the August baseline report.

Every dot on the map has a different story.

Yegunda Community, Epe

312

community-reported population

Road + water

primary visit route

HEALTH

No medical evacuation means recorded; traditional first aid

WATER + SANITATION

Well water; open defecation recorded at baseline

ENVIRONMENT

Flood water reported to stagnate for 1–2 weeks

ACCESS

Wooden landing; no mapped marine access point within 5 km

COMMUNITY REQUEST

Water, health, education, power and a jetty

Baseline conditions show why a practical water intervention matters here.

We did not stop at collecting data.

TELEMEDICINE

120 communities

Telemedicine support facilitated across riverine communities.

INSERT YEGUNDA SOLAR BOREHOLE FIELD PHOTO

CLEAN WATER

Yegunda Community, Epe

Solar-powered borehole donated or facilitated by Blue Lagos.

No beneficiary count claimed

CIVIC INCLUSION

PVC registration support

Facilitated in selected communities to support fuller participation in civic processes.

The field register is not just for reporting. It can help direct action.

We needed one place to connect all of this evidence.

Some interventions can serve several communities together.

Nearby communities with similar needs can be screened around one possible intervention location.

ACTUAL REGISTER SCREEN

11 communities within 5 km

75,242 community-reported population in the radius

Candidate point: Ito Agan community location

Planning analysis only. Final sites require land, engineering and government verification.

The next step is to connect evidence directly to service planning.

What the evidence can help government, partners and communities target.

KOH Meets Lagos Riverine Communities

A proposed agenda for His Excellency Dr. Kadri Obafemi Hamzat to engage the evidence, communities and next steps.

PROPOSED AGENDA

- | | | |
|----|----------------|---|
| 01 | Hear | What riverine communities are experiencing |
| 02 | See | The register, maps and community-level evidence |
| 03 | Review | Telemedicine, Yegunda water and PVC-support work |
| 04 | Select | One priority cluster and practical pilot intervention |
| 05 | Convene | Relevant MDAs, partners and community leadership |
| 06 | Agree | A clear validation, delivery and follow-up pathway |

COLLABORATION MODEL

Communities + leaders
Relevant Lagos State MDAs
Health, water + civic partners
Private and social-impact partners
Research + spatial/data support

Help us turn this evidence into a repeatable Lagos riverine planning programme.

CONNECT

Connect Blue Lagos with relevant MDAs and data owners.

PILOT

Select priority communities for one real intervention.

SCALE

Update data and monitor interventions across riverine Lagos.

134 communities | **502,002** people | **120** telemedicine communities

The goal is simple: make it easier for riverine communities to be seen, understood and served.
